RESEARCH EXPERIENCE

Machine Learning Engineer Intern , Kuaishou Technology, Beijing, China	07/2021 – Present
<ul style="list-style-type: none">○ Devised a new model-agnostic formulation for fine-grained cross-modal semantic alignment and subsumed the recent popular works into the proposed scheme○ Proposed a video-text retrieval method which is competitive when compared with the SOTA approaches with heavy model design by only altering the similarity function, submitted to IJCAI 2022○ Developed a PyTorch library for video-text retrieval which is benefiting the group members' research work	
Research Intern , Peking University, Beijing, China	08/2020 – Present
<ul style="list-style-type: none">○ Designed an efficient method for parameter importance estimation via Taylor expansion○ Proposed a fast meta-learning algorithm for continual learning problems, which expresses the gradient of meta-update in closed-form instead of using Hessian information, submitted to IJCNN 2022○ Outperformed strong baselines while optimizing much more efficient in experiments on popular benchmarks	
Undergraduate Researcher , Tongji University, Shanghai, China	03/2020 – 06/2020
<ul style="list-style-type: none">○ Proposed a novel framework consisting of a single-attribute captioning module and an unsupervised text summarization module for generating aesthetic captions for food images, published in ICTAI 2020 [Project]○ Designed a data filtering strategy inspired by TF-IDF method for building a dataset for this new task○ Designed two new evaluation criteria to assess the novelty and diversity of the generated captions○ Outperformed baselines and existed methods substantially in terms of diversity, novelty and coherence	
Research Intern , Peking University, Beijing, China	07/2018 – 08/2018
<ul style="list-style-type: none">○ Utilized the structure duality to boost the learning of two dual tasks based on shared hidden space○ Designed two denoising auto-encoders consisting of encoders and decoders of two traditional Seq2Seq neural machine translators to make use of unpaired data○ Outperformed strong baselines by 1.0 - 2.9 BLEU on IWSLT'15 and WMT'14 dataset
